Tolly Taylor

Another in the long list of talented volunteers at Ruthin Repair Café is Tolly Taylor who repairs mechanical items such as toys, clocks, wind up radios, fans and hoovers.

At home, he does all his own car repairs and mends household items for the family.

Tolly has a degree in mechanical engineering and works for Clarke Energy, a company involved in the transition to renewable energy. He is passionate about climate issues and protecting the environment which is why he volunteers at the Repair Café.

As a way of supplementing his income when he was at university, he used to buy broken handheld Dyson hoovers, repair them and then sell them. Strangely, his first ever item at the Repair Café was a Dyson hand held hoover!
